1.1 HOW TO USE:

- There are certain files with the extensions **.org** and **.md**. These files are used to create the **.pdf** files that have the same file name. They will have the same content but slightly different formatting compared to their **.pdf** files. They will also open more easily online and are much smaller in size. If you see a **.org** file with the same name as another file, it is usually easier to view the **.org** because it will not have to be downloaded.
- Files with the **.bbl** and **.out** files are used as support files, and they may be unreadable.
- **.pdf**, **.md**, and **.org** files can all be read online, in the browser window.
- Other files, like Microsoft Office documents (**.docx**, **.pptx**, **.xlsx**) will have to be downloaded following the instructions below.

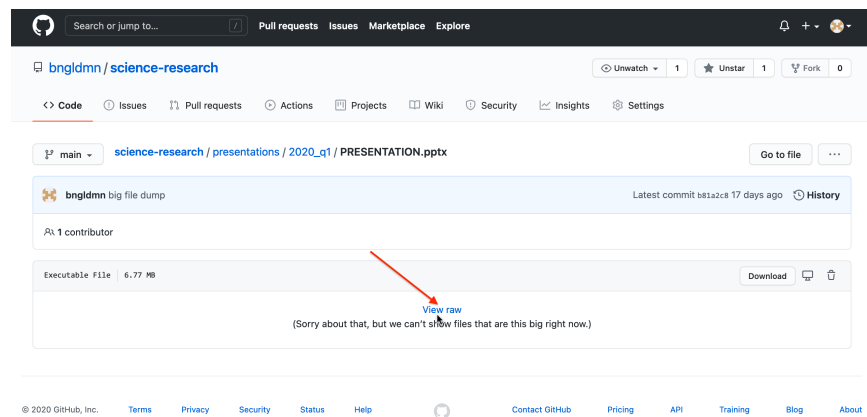

- Finally, files with the extensions `.odt` and `.odp` can be opened in Word and PowerPoint, respectively.

1.1.1 Generally, most of my documents are in `.pdf` form.

1.1.2 Files named `readme.md` or `readme.org` are summary/explanation for certain folders, or they contain an online-viewable copy of that folder's content.

Navigate repository on website and download files individually as needed.

- Navigate by clicking on folder links at top
- Certain files cannot be viewed online, click “View Raw” to download and open offline.
